

PROFILE HIGHLIGHTS

Engineering Manager with **15+ years** building and scaling cross-functional engineering organisations for **the Financial Services Industry**. Operationalizing enterprise-class **Digital Factories** that industrialize **Digital Transformation**, moving from pilot to production at pace, supported by a platform-as-a-product discipline, microservices and event-driven architectures, embedded security & audit-ready governance. Equally credible in a bid & proposal oral/pitch, in a programme steering committee or in a sprint retrospective. This is the **leadership operating system** I aim to bring to the **EY Luxembourg Digital Factory**.

CAREER HIGHLIGHTS AND ACHIEVEMENTS

ENGINEERING TEAM & PEOPLE LEADERSHIP

- Led portfolios of up to 6 concurrent agile-aligned engineering squads (7–10 FTE each) across regulated FSI Digital Factories: built, retained, and developed cross-functional teams of cloud, backend, and data engineers under strict Partner-sponsored headcount plans.
- ✓ voluntary attrition reduced from the ~12% practice benchmark to <8% sustained
 - ✓ team eNPS lifted from firm-average baseline to ~30% above service-line peers
 - ✓ promotion success rate from typical ~66% to 80% first-submission, 100% within two cycles

DELIVERY & EXECUTION

- Owned delivery and execution outcomes across regulated FSI Digital Factories, sustaining predictable flow at squad and programme level through dual-instrument delivery health: DORA for the engineering of the Digital Factories, SPACE for the teams.
- ✓ DORA uplifted from Low/Medium to High tier : 1) deploy frequency monthly to weekly, 2) lead time ~2 weeks to 2 days
 - ✓ 3) MTTR over a day initially, improved to ~6h , 4) change failure rate held at 20% under FSI compliance overhead

TECHNICAL STEWARDSHIP

- Co-designed and upheld engineering standards across several FSI Digital Factories through 2 disciplines: a modern SDLC anchored in DevOps, DevSecOps, FinOps practices, and architectural stewardship anchored in enterprise reference architectures, reuse, and tech-debt control.
- ✓ CI/CD/Test + IaC coverage lifted from sub-50% baseline to 80%
 - ✓ critical/high vulnerability SLA adherence from ~70% to 95% (7/30-day target)
 - ✓ reuse rate on new builds lifted from <30% to 70%
 - ✓ tech debt ratio uplifted from C-grade (~20%) to B-grade (~10%) on legacy FSI codebases

QUALITY, RELIABILITY & OPERABILITY

- Drove operational excellence across audit-ready FSI Digital Factories under regulatory constraints through two disciplines: SRE for observable quality and reliability, Platform Engineering for production readiness and self-service operability.
- ✓ SLO attainment lifted from 99.0% to 99.99% on critical services
 - ✓ P1 MTTR from ~2h to <30min with toil held below the Google SRE 50% target
 - ✓ Self service Internal Developer Platforms adoption from ~40% to ~75% on golden paths with ~33% run-time FinOps cloud-cost reduction
 - ✓ RegOps : production readiness first-pass approval from ~65% to ~90%, FSI regulatory inspections cleared without findings

CREDENTIALS

EDUCATION

Master of Computer Science
Université Aix-Marseille · 2009

CERTIFICATIONS

- Scrum: PSM · PSPO · Kanban
- Lean Six Sigma Black Belt
- ITIL Certified
- SAFe Practitioner
- TOGAF Practitioner

LANGUAGES

- French — native
- English — full professional
- Spanish — professional working

PROFESSIONAL EXPERIENCE

Engagement Manager · Deloitte, Technology & Transformation

2023 — Now

Director-track band: portfolio of up to 6 concurrent engagements for 2 Digital Factories across regulated FSI in Canada; led cross-functional engineering teams (cloud, DevOps, fullstack, data, security, architecture...) under strict regulatory and audit constraints; Partner-adjacent client and risk ownership.

BDC (Business Development Bank of Canada) — Digital Factory

Digitizing the investment lifecycle for one of Canada's leading asset-management (PE/VC) institutions across 3 business domains: deal sourcing & selection (Investment Intelligence Engine), operational velocity (modular decisioning & onboarding), portfolio monitoring (real-time data highway).

- ☑ Led 3 cross-functional engineering squads of 8 FTE each (one per business domain), 24 FTE cumulative across cloud, DevOps, backend, data engineers.. under a strict Partner-sponsored headcount plan, with embedded SMEs and architecture support; coordinated multi-squad delivery of the Investment Intelligence Engine, the modular decisioning platform (automated KYC/AML), and the portfolio data highway on a SAFe-inspired cadence.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps for regulated underwriting) and architectural decisions across microservices, event-driven pipelines, and data-connector layers (CRA, Equifax, QuickBooks, Xero).
- ☑ Operated SRE practices on the real-time alerting layer (burn-rate, MRR-dip triggers) feeding the GPs-facing investment Command Center; stood up Platform Engineering paved paths and run-time FinOps controls across the 3 squads.

Desjardins Bank — Digital Factory

Digitalizing the omnichannel member journey for Canada's largest cooperative financial group across 3 business domains: omnichannel synergy (mobile-to-branch continuity), ecosystem integration across banking, insurance, wealth management, and legacy core modernization through a microservices buffer layer.

- ☑ Led 3 cross-functional engineering squads (8, 10, and 7 FTE, one per business domain), 25 FTE cumulative across cloud, fullstack, data engineering... with embedded UX and architecture partners; owned predictable delivery across the omnichannel API layer (mortgage journey continuity), the single-view-of-member integration, and the microservices buffer over the legacy core.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and the microservices/event-driven (CDC/asynchronous patterns) architecture sitting on top of 30-year-old mainframes; championed reuse patterns across banking, insurance, and wealth business lines.
- ☑ Built SRE practices for the omnichannel mortgage and ATM journeys with SLO-driven operations and blameless post-incident learning; stood up Platform Engineering paved roads across banking, insurance, and wealth business lines.

Senior Manager · IBM Consulting

2019 — 2023

Direct line management of cross-functional engineering teams delivering Digital Factory platforms across Capital Markets and national Payments infrastructure in regulated environments; accountable for delivery, architectural integrity, and stakeholder reporting end-to-end.

RBC Capital Markets — Digital Factory

Industrializing intelligence and liquidity at Canada's largest investment bank across two business domains: AI-driven algorithmic execution (Aiden-class reinforcement-learning platforms minimising market impact) and institutional client self-service portals (FX hedging, proprietary research, trade settlement).

- ☑ Led 2 cross-functional engineering squads of 8 FTE each (one per business domain), 16 FTE cumulative across backend, cloud, and platform engineers, with embedded quants and trading SMEs; coordinated delivery of algorithmic execution platform refinements and the institutional client portal (FX, derivatives, research, trade settlement) on a SAFe-aligned cadence.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and architectural integrity: low-latency microservices, event-driven market-data pipelines, and API-first design patterns for institutional consumers.
- ☑ Operated SRE for sub-second SLOs on the execution path; built Platform Engineering for the institutional client portal and the internal developer platform supporting algorithmic trading workflows; coordinated production readiness for high-stakes regulatory operations.

Payments Canada — Digital Factory

Industrializing national financial resilience and interoperability for the country's central payments operator across three business domains: ISO 20022 standardization (Lynx programme), real-time settlement (Real-Time Rail, 24/7/365 irrevocable transactions), and open-access API-fication for non-traditional financial institutions.

- ☑ Led 3 cross-functional engineering squads of 10 FTE each (one per business domain), 30 FTE cumulative across backend, data, and platform engineers under strict regulatory and audit constraints; coordinated multi-vendor delivery of the ISO 20022 data-mapping engine for Lynx, the Real-Time Rail settlement engine, and the standardized open-access gateway APIs.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and architectural decisions on data-rich message processing, 24/7 high-availability settlement architecture, and secure gateway design for Fintechs and smaller financial institutions.
- ☑ Built SRE practices for irrevocable real-time payments (zero data loss, 24/7/365 operability) under continuous regulatory inspection; built Platform Engineering for the open-access gateway, standardizing self-service onboarding for Fintechs.

Manager · Accenture

2018 — 2019

Engineering Manager for a major retailer's Software Factory: 12-engineer cross-functional squad serving 300+ developers across e-commerce, supply chain, and loyalty.

- ☑ Owned the full delivery lifecycle and applied Team Topologies to align engineering, security, DevOps, and product; cut Lead Time for Changes and accelerated Deployment Frequency 3x.

EARLIER EXPERIENCE

- **Cloud Solutions Architect**, OVHcloud (2017 — 2018) — GDPR-compliant sovereign cloud reference architectures for regulated financial and public-sector clients.
- **Senior Managing Consultant**, Capgemini, Defence & Space (2015 — 2016) — zero-defect CI/CD pipeline aligned to defence-grade certification on a classified mission-critical embedded systems programme.
- **Senior Consultant**, Cognizant (2011 — 2015) — Agile, DevOps, and SRE rollouts on pan-European cloud platforms for Banking and Telecom clients across Europe and North Africa.
- **Head of Cloud Engineering**, GreenSaaS → Fiducial Cloud (2008 — 2011) — founded and led the engineering team at one of France's first SaaS / cloud platform providers; acquired by Fiducial Group.
