

PROFILE HIGHLIGHTS

Engineering leader with **17+ years** building and scaling cross-functional engineering organisations (**teams of 15–30+**) for the **Financial Services & Insurance industry** : Finary's exact arena. My specialty is operationalizing **Digital & AI Factories**: product orgs where engineers and **autonomous agents co-work** to ship delightful features fast, making **AI the default** for code, tests, reviews and deploys with output **measured (targeting 3–5×)**, not assumed. I own engineering **end-to-end** — people, architecture, hiring, delivery, quality — pairing enterprise-grade delivery discipline (DORA, SPACE, SRE, Platform Engineering) with **startup builder DNA** (founded a SaaS/cloud company, acquired, 7x EBITDA). My value proposition for Finary is singular: build the **Finary AI Factory** and lead the AI-native transformation end-to-end.

Active personal investor across equities, ETFs, crypto and real estate — I'd be building the product I use to manage my own money.

CAREER HIGHLIGHTS AND ACHIEVEMENTS

AI-NATIVE ENGINEERING & THE AI FACTORY

- Designed and steered the operating model of human + agent **AI Factories** — where engineers and autonomous agents co-deliver — making AI the default reflex for code, tests, reviews and deploys, with throughput measured rather than assumed.
- ✓ engineering output per FTE lifted from 1× baseline to ~3.4×, measured on normalized merged-PR throughput + story-point velocity
 - ✓ AI/agent-authored code in merged PRs from <5% to ~72%; agent first-pass code review from 0% to ~90% of PRs (human-in-the-loop on merge)
 - ✓ agent-generated & maintained automated tests from 0% to ~65% of suite; DORA lead time for changes ~2 weeks → ~2 days, deploy cadence monthly → on-demand
 - ✓ a 12+ delivery-agent fleet (scaffolding, test-gen, review, migration, observability) embedded across squads; SPACE developer satisfaction +30 pts with toil held <50% (Google SRE target)

ENGINEERING TEAM & PEOPLE LEADERSHIP

- Led portfolios of up to 6 concurrent agile-aligned engineering squads (7–10 FTE each, **30+ engineers at peak**) across regulated FSI Digital & AI Factories: built, retained, and developed cross-functional teams of cloud, backend, and data engineers under strict Partner-sponsored headcount plans.
- ✓ voluntary attrition reduced from the ~12% practice benchmark to <8% sustained
 - ✓ team eNPS lifted from firm-average baseline to ~30% above service-line peers
 - ✓ promotion success rate from typical ~66% to 80% first-submission, 100% within two cycles

DELIVERY & EXECUTION

- Owned delivery and execution outcomes across regulated FSI Digital & AI Factories, sustaining predictable flow at squad and programme level through dual-instrument delivery health: DORA for the engineering of the Factories, SPACE for the teams.
- ✓ DORA uplifted from Low/Medium to High tier : 1) deploy frequency monthly to weekly, 2) lead time ~2 weeks to 2 days
 - ✓ 3) MTTR over a day initially, improved to ~6h , 4) change failure rate held at 20% under FSI compliance overhead

TECHNICAL STEWARDSHIP & RELIABILITY

- Upheld engineering standards across FSI Digital & AI Factories — a modern SDLC anchored in DevOps/DevSecOps/FinOps and architectural stewardship (reference architectures, reuse, tech-debt control) — then drove operational excellence through SRE and Platform Engineering for self-service operability.
- ✓ CI/CD/Test + IaC coverage lifted from sub-50% baseline to 80%; reuse on new builds from <30% to 70%
 - ✓ SLO attainment 99.0% → 99.99% on critical services; P1 MTTR ~2h → <30min; IDP adoption ~40% → ~75% with ~33% FinOps cloud-cost reduction
 - ✓ RegOps: production-readiness first-pass approval ~65% → ~90%; FSI regulatory inspections cleared without findings

CREDENTIALS

EDUCATION	CERTIFICATIONS	LANGUAGES
Master of Computer Science Université Aix-Marseille · 2009	■ Scrum: PSM · PSPO · Kanban ■ Lean Six Sigma Black Belt ■ ITIL Certified ■ SAFe Practitioner ■ TOGAF Practitioner	■ French — native ■ English — full professional ■ Spanish — professional working

PROFESSIONAL EXPERIENCE

Engagement Manager · Deloitte, Technology & Transformation

2023 — Now

VP-equivalent scope: owned engineering end-to-end — people, architecture, hiring, delivery, quality — across a portfolio of up to 6 concurrent Digital & AI Factories in regulated FSI (Canada); led cross-functional engineering teams (cloud, DevOps, fullstack, data, security, architecture) under strict regulatory and audit constraints; Partner-adjacent client and risk ownership.

BDC (Business Development Bank of Canada) — Digital & AI Factory

Digitizing the investment lifecycle for one of Canada's leading asset-management (PE/VC) institutions across 3 business domains: deal sourcing & selection (Investment Intelligence Engine), operational velocity (modular decisioning & onboarding), portfolio monitoring (real-time data highway).

- ☑ Led 3 cross-functional engineering squads of 8 FTE each (one per business domain), 24 FTE cumulative across cloud, DevOps, backend, data engineers under a strict Partner-sponsored headcount plan; coordinated multi-squad delivery of the AI-driven Investment Intelligence Engine, the modular decisioning platform (automated KYC/AML), and the portfolio data highway on a SAFe-inspired cadence.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps for regulated underwriting) and architectural decisions across microservices, event-driven pipelines, and data-connector layers (CRA, Equifax, QuickBooks, Xero); introduced AI-assisted delivery into the engineering flow.
- ☑ Operated SRE practices on the real-time alerting layer (burn-rate, MRR-dip triggers) feeding the GP-facing investment Command Center; stood up Platform Engineering paved paths and run-time FinOps controls across the 3 squads.

Desjardins Bank — Digital & AI Factory

Digitalizing the omnichannel member journey for Canada's largest cooperative financial group across 3 business domains: omnichannel synergy (mobile-to-branch continuity), ecosystem integration across banking, insurance, wealth management, and legacy core modernization through a microservices buffer layer.

- ☑ Led 3 cross-functional engineering squads (8, 10, and 7 FTE, one per business domain), 25 FTE cumulative across cloud, fullstack, data engineering with embedded UX and architecture partners; owned predictable delivery across the omnichannel API layer (mortgage journey continuity), the single-view-of-member integration, and the microservices buffer over the legacy core.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and the microservices/event-driven (CDC/asynchronous patterns) architecture sitting on top of 30-year-old mainframes; championed reuse patterns across banking, insurance, and wealth business lines.
- ☑ Built SRE practices for the omnichannel mortgage and ATM journeys with SLO-driven operations and blameless post-incident learning; stood up Platform Engineering paved roads across banking, insurance, and wealth business lines.

Senior Manager · IBM Consulting

2019 — 2023

Direct line management of cross-functional engineering teams delivering Digital & AI Factory platforms across Capital Markets and national Payments infrastructure in regulated environments; accountable for delivery, architectural integrity, and stakeholder reporting end-to-end.

RBC Capital Markets — Digital & AI Factory

Industrializing intelligence and liquidity at Canada's largest investment bank across two business domains: AI-driven algorithmic execution (Aiden-class reinforcement-learning platforms minimising market impact) and institutional client self-service portals (FX hedging, proprietary research, trade settlement).

- ☑ Led 2 cross-functional engineering squads of 8 FTE each (one per business domain), 16 FTE cumulative across backend, cloud, and platform engineers, with embedded quants and trading SMEs; coordinated delivery of the AI/RL algorithmic execution platform and the institutional client portal (FX, derivatives, research, trade settlement) on a SAFe-aligned cadence.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and architectural integrity: low-latency microservices, event-driven market-data pipelines, and API-first design patterns for institutional consumers.
- ☑ Operated SRE for sub-second SLOs on the execution path; built Platform Engineering for the institutional client portal and the internal developer platform supporting algorithmic trading workflows; coordinated production readiness for high-stakes regulatory operations.

Payments Canada — Digital & AI Factory

Industrializing national financial resilience and interoperability for the country's central payments operator across three business domains: ISO 20022 standardization (Lynx programme), real-time settlement (Real-Time Rail, 24/7/365 irrevocable transactions), and open-access API-fication for non-traditional financial institutions.

- ☑ Led 3 cross-functional engineering squads of 10 FTE each (one per business domain), **30 FTE cumulative** across backend, data, and platform engineers under strict regulatory and audit constraints; coordinated multi-vendor delivery of the ISO 20022 data-mapping engine for Lynx, the Real-Time Rail settlement engine, and the standardized open-access gateway APIs.
- ☑ Stewarded the SDLC (CI/CD, trunk-based, DevSecOps) and architectural decisions on data-rich message processing, 24/7 high-availability settlement architecture, and secure gateway design for Fintechs and smaller financial institutions.
- ☑ Built SRE practices for irrevocable real-time payments (zero data loss, 24/7/365 operability) under continuous regulatory inspection; built Platform Engineering for the open-access gateway, standardizing self-service onboarding for Fintechs.

Manager · Accenture

2018 — 2019

Engineering Manager for a major retailer's Software Factory: 12-engineer cross-functional squad serving 300+ developers across e-commerce, supply chain, and loyalty.

- ☑ Owned the full delivery lifecycle and applied Team Topologies to align engineering, security, DevOps, and product; cut Lead Time for Changes and accelerated Deployment Frequency 3x.

EARLIER EXPERIENCE

- **FOUNDER Head of Cloud Engineering**, GreenSaaS → Fiducial Cloud (2008 — 2011) — founded and led the engineering team at one of France's first SaaS / cloud platform providers, scaling it from first technical hire to acquisition by Fiducial Group.
- **Cloud Solutions Architect**, OVHcloud (2017 — 2018) — GDPR-compliant sovereign cloud reference architectures for regulated financial and public-sector clients.
- **Senior Managing Consultant**, Capgemini, Defence & Space (2015 — 2016) — zero-defect CI/CD pipeline aligned to defence-grade certification on a classified mission-critical embedded systems programme.
- **Senior Consultant**, Cognizant (2011 — 2015) — Agile, DevOps, and SRE rollouts on pan-European cloud platforms for Banking and Telecom clients across Europe and North Africa.
