Currently: Engagement Manager at Deloitte, Technology & Transformation

ex-IBMer, ex-Accenture, ex-Capgemini

PROFILE HIGHLIGHTS

I have spent 15+ years architecting and advising on enterprise-scale technology strategies — advancing technical maturity for FSI, Telco, Energy, and Utilities organisations by continuously monitoring emerging technologies and translating them into actionable roadmaps.

- **The pattern:** a brilliant multidisciplinary team with world-class infrastructure access — held back by architectural gaps and unresolved technical challenges costing them velocity, security posture, and competitive agility.
- **The approach:** start with the engineering and business problem, map the friction, align stakeholders across engineering, security, DevOps, and QA teams. Shape the technology roadmap, remove blockers, and embed the architecture and secure software practices that make fast delivery safe by default.
- **The result:** organisations that move from architectural debt to technical maturity — with zero-friction collaboration across disciplines, a governed cloud and containerisation foundation, and the secure software lifecycle to sustain it.

HARD SKILLS — TECHNOLOGIES & FLOW

Hybrid & Distributed Cloud (XaaS)

Architects the cloud foundation across all major hyperscalers and on-prem — from greenfield cloud-native and Kubernetes-native builds to sovereign hybrid patterns for regulated industries. Brings the infrastructure depth that CTO offices need to evaluate, select, and govern technology choices with confidence.

- AWSGCPAzureIBM CloudKubernetes EcosystemContainersGSLBFederated Control Plane

Software Engineering Practices

Embeds the culture and tooling that makes fast delivery safe by default: zero-trust security, observable systems, CI/CD pipelines, and event-driven architectures. Advances organisations along the secure software lifecycle maturity curve — from siloed teams to integrated engineering, security, DevOps, and QA workflows.

- DevSecOpsSREMLOpsFinOpsSecure Software LifecycleAPI-firstMicroservices

Digital & AI Platform as a Product

Builds platforms with a roadmap, backlog, and real customers — turning Internal Developer Platforms and Enterprise AI hubs from IT cost centres into business-velocity engines. Shapes technology roadmaps that connect emerging technology trends to measurable business outcomes.

- Technology RoadmapLean BudgetRoadmap & BacklogBusiness VelocityDesign ThinkingSystem Thinking

Extended Enterprise & Ecosystem Management

Designs and operates the partner and developer layer that extends platform reach beyond the enterprise — from API gateway architecture to ISV onboarding programmes that turn technology alliances into scalable, governed revenue channels.

- API GatewayISV OnboardingPartner EcosystemsDeveloper PortalsEcosystem Governance

Frameworks & Methodologies

Selects and applies the right delivery framework for the scale and context — SAFe at programme level, Team Topologies for organisational design, TOGAF for enterprise architecture. Grounds technology decisions in a structured, auditable methodology that senior leadership and regulators can follow.

SOFT SKILLS — LEADERSHIP & OUTCOMES

Executive & Stakeholder Communication

Bridges technical depth and executive language — translating complex architectural recommendations and technology choices into actionable insights for both technical teams and non-technical senior stakeholders. Equal fluency in a boardroom and a sprint review.

- C-Suite CommunicationExecutive PresenceTechnical StorytellingStakeholder MgmtBoardroom Fluency

Cross-functional Collaboration & Alignment

Drives consensus across engineering, security, DevOps, QA, and product teams without losing delivery momentum — building strong cross-team collaboration that accelerates collective progress on technical initiatives.

- Consensus BuildingEngineering AlignmentSecurity & ComplianceCross-team DeliveryDelivery Momentum

Team Leadership & Talent Development

Builds, mentors, and scales high-performing cross-functional engineering teams around Lean and Agile delivery cultures — developing the internal capability that sustains technical maturity long after the engagement closes.

- Team BuildingMentoringCross-functional TeamsLean CultureAgile Delivery

Negotiation & Conflict Resolution

Manages competing priorities across multi-vendor, multi-squad environments while preserving long-term partner and client relationships — unblocking technical challenges that stall delivery without burning stakeholder trust.

PROFESSIONAL EXPERIENCE

2023 —
Now

Engagement Manager · Deloitte, Technology & Transformation

Advising client organisations on Digital & AI platform strategy across Financial Services, Insurance, and Telecom. Supports client CTOs and CIOs on technology roadmaps, architecture decisions, and technical maturity advancement.

- Advise CTO and CIO stakeholders on technology choices, cloud and container architecture, and secure software lifecycle strategy — translating complex technical concepts into executable roadmaps
- Unblock cross-functional engineering, security, DevOps, and QA teams by diagnosing architectural challenges and providing actionable solutions
- Monitor emerging technologies — cloud-native, Kubernetes, AI infrastructure, DevSecOps — and feed insights into client technology roadmap development

2019 —
2023

Senior Manager · IBM Consulting

Advised senior technology leaders across Payments, Capital Markets, and Telecom on Platform-as-a-Service adoption and multi-cloud architecture strategy. Bridged technical engineering teams with C-suite leadership.

- Architected and advised on multi-cloud API & Developer Portal platforms serving 200+ internal and external consumers across regulated industries
- Provided expert advisory on technology choices and roadmaps — communicating architectural recommendations to both technical teams and executive sponsors
- Shaped the platform-as-a-product operating model and introduced metrics-driven adoption frameworks across the EMEA practice

2018 —
2019

Manager · Accenture

Led design and delivery of a major retailer's Internal Developer Platform supporting 300+ engineers across e-commerce, supply chain, and loyalty product squads.

- Advised digital leadership on platform-as-a-product model and Team Topologies re-organisation — aligning engineering, security, DevOps, and product teams around a shared infrastructure vision
- Delivered self-service tooling reducing environment provisioning by an order of magnitude, advancing the organisation's DevOps maturity

2017 —
2018

Cloud Solutions Architect · OVHcloud

Designed GDPR-compliant sovereign cloud architecture patterns for regulated financial and public-sector clients. Advised on cloud platform adoption and secure architecture choices for hybrid cloud environments across the French enterprise market.

2015 —
2016

Senior Managing Consultant · Capgemini — Defence & Space

Co-delivered a PaaS platform for a mission-critical embedded systems programme in a classified environment. Zero-defect CI/CD pipeline with full traceability and secure software delivery controls.

2011 —
2015

Senior Consultant · Cognizant

Co-built and managed pan-European cloud platforms (IaaS, PaaS, CaaS) for Banking and Telecoms clients. Introduced Agile, DevOps, and SRE practices across legacy transformation programmes across Europe and North Africa.

2008 —
2011

Head of Cloud Engineering · GreenSaaS → Fiducial Cloud

One of France's first SaaS / cloud platform providers. Designed and built multi-tenant infrastructure from the ground up — monitoring emerging cloud technologies and translating them into production-grade platform architecture. Company acquired by Fiducial Group.

ACHIEVEMENTS — SELECTED ENGAGEMENTS

The AI Factory

Global Conglomerate — Energy & Utilities

Advised CTO on the missing platform layers between raw GPU infrastructure and engineering teams. Designed Kubernetes-based container orchestration, FinOps governance, and secure software lifecycle controls — unblocking the entire AI delivery organisation and transforming a raw infrastructure investment into a self-service AI marketplace with unified governance.

12 months · \$3M · 14-FTE

SUCCESS METRICS

- 98%↓ AI Service Provisioning Time
- 100% Self-service AI Marketplace Adoption

Internal Developer Platform

Major EMEA Telecom

Advised EMEA telco CTO on platform-as-a-product operating model. Aligned engineering, security, DevOps, and QA teams around a shared infrastructure vision — eliminating critical provisioning bottlenecks and advancing the organisation's technical maturity. Delivered a self-service IDP with 500+ voluntary adopters and a 3× increase in deployment frequency.

10 months · \$2.8M · 12-FTE

SUCCESS METRICS

- 99.1%↓ Provisioning (18 days → 4 hours)
- \$9M/yr Productivity Recovered
- 3× Deployment Frequency
- 500+ Voluntary Adopters

Insurance-as-a-Service Platform

Tier-1 NA Carrier — Insurtech

Advised CIO on rescuing a stalled hyperscaler investment. Shaped technology roadmap and scalable API architecture to clear 140+ regulatory controls with zero findings — communicating complex cloud architecture choices to both technical leadership and compliance stakeholders. Reframed the programme from infrastructure migration to API ecosystem strategy.

18 months · \$5M · 22-FTE

SUCCESS METRICS

- 79%↓ Partner Onboarding (14 → 3 wk)
- 140+ Regulatory Controls, 0 Findings

Open Banking Platform

Major EU Retail Bank — Fintech

Advised on API ecosystem architecture and emerging open banking standards. Shaped technology choices for the partner and developer portal strategy — compressing time-to-first-API-call from 3 weeks to 2 days and enabling the bank's largest-ever fintech partner cohort on day one. Delivered 30+ live integrations at launch.

14 months · \$4.2M · 18-FTE

SUCCESS METRICS

- 90%↓ Time-to-First-API-Call
- 30+ Fintech Partners, Day One
