

Laurent Vincentelli

Digital & AI Factory Engineering Manager
Industrializing Digital & AI Transformation for Regulated FSI

CANDIDACY PITCH

EY Luxembourg Digital Factory · Engineering Manager (Associate Director)

laurent@vincentelli.pro · [linkedin.com/in/laurentvincentelli](https://www.linkedin.com/in/laurentvincentelli) · Schengen space citizenship (French)

Currently: Engagement Manager at **Deloitte, Technology & Transformation** (Canada) · ex-IBMer, ex-Accenture, ex-Capgemini

PROFILE & THESIS

PROFILE SUMMARY

Engineering Manager with **15+ years** building and scaling cross-functional engineering organisations for **the Financial Services Industry**. Operationalizing enterprise-class **Digital Factories** that industrialize **Digital Transformation**, moving from pilot to production at pace, supported by a platform-as-a-product discipline, microservices and event-driven architectures, embedded security & audit-ready governance. Equally credible in a bid & proposal oral/pitch, in a programme steering committee or in a sprint retrospective. This is the **leadership operating system** I aim to bring to the **EY Luxembourg Digital Factory**.

MY PROPOSITION

My candidacy for the EY Luxembourg Digital Factory rests on two interlocking commitments:

- I will **(1) lead the engineering team(s)** : cloud & data engineers, backend developers, QA, DevSecOps, Platform Engineers, organizing a cross-functional team topology with Business Stakeholders, SMEs, Architects, PMO, Cyber, Products & Design to enable the flow of Value.
- **Through that team, I will own** the (2) Delivery & Execution, (3) Technical Stewardship, and (4) Quality, Reliability & Operability value streams for the EY Luxembourg Digital Factory, while fostering software engineering culture, continuous learning and improvement.

01 ENGINEERING TEAM & LEADERSHIP

02 DELIVERY & EXECUTION

03 TECHNICAL STEWARDSHIP

04 QUALITY, RELIABILITY, OPERABILITY

These four mandates are my value proposition to the EY Luxembourg Digital Factory, drawn from 15+ years of standing up, scaling (or pivoting) and operating Digital Factories across regulated Financial Services.

PROVEN ACROSS REGULATED FSI DIGITAL FACTORIES

BDC (Business Development Bank of Canada) · Desjardins · RBC Capital Markets · Payments Canada

01 ENGINEERING TEAM & PEOPLE LEADERSHIP

Anchored by a Partner-sponsored headcount plan, my leadership will operate along two axes: developing every engineer individually, and raising the collective bar of the team as a software engineering organization.

- **Individual axis:** growth-oriented performance conversations on individualised development plans, mapping each engineer's trajectory to the EY Luxembourg Digital Factory's backlogs and roadmap.
- **Individual axis:** coach leads and engineers across adjacent domains by leveraging the SPACE framework to operationalize engineering maturity.
- **Collective axis:** institutionalize and steer EY Luxembourg Digital Factory engineering governance through a Center of Excellence (CoE).
- **Collective axis:** champion an inclusive, high-trust, blameless culture by leveraging the Westrum Model, institutionalizing a "generative", performance-oriented system that drives organizational excellence.

SIGNATURE KPIS

Led portfolios of up to 6 concurrent FSI agile-aligned squads (7–10 FTE) across regulated Digital Factories.

- ☑ voluntary attrition reduced from the ~12% practice benchmark to <8% sustained
- ☑ team eNPS lifted from firm-average baseline to ~30% above service-line peers
- ☑ promotion success rate from typical ~66% to 80% first-submission, 100% within two cycles

02 DELIVERY & EXECUTION

I will own delivery and execution outcomes for the EY Luxembourg Digital Factory, sustaining predictable flow at two scales: squad-level and programme-level, while aligning scope, capacity, and budget with Business objectives and FSI compliance.

- **Flow axis (squad):** coach scrum ceremonies (planning, reviews, retrospectives) that keep work moving and impediments visible at squad level.
- **Flow axis (scaled):** coordinate multi-squad, multi-vendor delivery across onshore, nearshore, and offshore centres on a SAFe-inspired cadence.
- **Alignment axis:** partner with Business, Product, Design, Architecture, Security, and Data to refine scope and balance trade-offs against backlogs, roadmap, capacity, budget, and FSI compliance.
- **Alignment axis:** represent engineering in governance and portfolio forums with transparent updates on progress, risks, and mitigations, surfacing opportunities for scope expansion and follow-on funding for Partner conversion.

SIGNATURE KPIS

Ran dual-instrument delivery health: DORA for the FSI Digital Factory I managed, SPACE for the teams I led.

DORA uplifted from Low/Medium to High tier

- ☑ deploy frequency monthly to weekly
- ☑ lead time ~2 weeks to 2 days
- ☑ MTTR over a day initially improved to ~6h
- ☑ Change failure rate held at 20% under FSI compliance overhead

03 TECHNICAL STEWARDSHIP

I will operationalize and safeguard the engineering standards of the EY Luxembourg Digital Factory through two disciplines: a modern SDLC anchored in DevOps, and architectural stewardship anchored in enterprise reference architectures, reuse, and tech-debt control.

- **SDLC axis (DevOps):** oversee the consistent adoption of a high-velocity SDLC: trunk-based development, code reviews, CI/CD, automated testing, Infrastructure as Code as the default pipeline pattern.
- **SDLC axis (DevSecOps + FinOps):** enforce systemic integration of shift-left security (SAST/DAST, dependency and secret scanning) and cost-aware build practices (FinOps tagging discipline, budget gates) baked into every pipeline.
- **Architecture axis (framework):** steward the Digital Factory's adherence to reference architectures (cloud, microservices) by institutionalizing the systematic use of Architecture Decision Records (ADRs) to ensure traceability and long-term architectural integrity.
- **Architecture axis (reuse + debt):** champion reuse across the architectural runway through shared libraries, components, and templates; systematically remediate defects and technical debt to keep solutions maintainable and cost-efficient.

SIGNATURE KPIS

Stewarded SDLC and architecture across several FSI Digital Factories.

- ☑ CI/CD/Test + IaC coverage lifted from sub-50% baseline to 80%
- ☑ critical/high vulnerability SLA adherence from ~70% to 95% (7/30-day target)
- ☑ reuse rate on new builds lifted from <30% to 70%
- ☑ tech debt ratio uplifted from C-grade (~20%) to B-grade (~10%) on legacy FSI codebases

04 QUALITY, RELIABILITY & OPERABILITY

I will drive operational excellence across the EY Luxembourg Digital Factory, keeping it FSI compliant and audit-ready at all times through two disciplines: SRE for quality and reliability, and Platform Engineering for production readiness and self-service operability.

- **SRE axis (observability):** champion observability practices (logs, metrics, traces) and codify quality into SLOs, SLIs, and error budgets that drive engineering decisions.
- **SRE axis (incident discipline):** lead a blameless incident culture with runbooks and structured post-incident reviews that translate every outage into durable systemic improvements and toil reduction.
- **Platform axis (self-service):** champion an internal developer platform with golden paths, self-service infrastructure, and run-time FinOps controls that lift the whole engineering organisation.
- **Platform axis (readiness):** orchestrate production readiness, launch reviews, and hypercare in partnership with SMEs, product and support functions to ensure stable operations.

SIGNATURE KPIS

Operated SRE and Platform Engineering disciplines across audit-ready FSI Digital Factories.

- ☑ SLO attainment lifted from 99.0% to 99.99% on critical services
- ☑ P1 MTTR from ~2h to <30min with toil held below the Google SRE 50% target
- ☑ IDP adoption from ~40% to ~75% on golden paths with ~20% run-time FinOps cloud-cost reduction
- ☑ RegOps : production readiness first-pass approval from ~65% to ~90%, FSI regulatory inspections cleared without findings

WHAT I BRING · WHY EY LUXEMBOURG · WHY NOW

<8% attrition

vs ~12% practice benchmark on FSI engagements

eNPS +30%

above service-line peers across teams I led

80% promotion success

on first submission, 100% within two cycles

DORA: Low/Med → High

weekly deploys, 2-day lead time, ~6h MTTR

99.9% SLO attainment

on critical services, P1 MTTR <30min

Audit-clean record

FSI regulatory inspections cleared without findings

WHY EY LUXEMBOURG · WHY NOW

- **With the EY Luxembourg Digital Factory**, the firm is positioning to enable, accelerate Digital & AI transformation for its clients, a leading posture at a moment when the market is moving and ready.
- **EY Luxembourg's FSI Partners need an FSI-fluent engineering leader** who can operationalize a Digital Factory that ships value predictably, stays audit-ready under FSI regulatory constraints, and scales across mandates. The EY Luxembourg Digital Factory is the right construct, at the right moment, considering the right engineering organization .
- **I aim to bring 15+ years of FSI Digital Factories Operating Model, ready to deploy from day one:** Partner-aligned headcount planning, dual-instrument delivery health, SDLC/DevOps/FinOps + architectural stewardship, and SRE + Platform Engineering for audit-grade operability. Same playbook I have run, scaled, (or pivoted) across four regulated Canadian FSI Digital Factories.

Challenge me.

HAPPY TO DEFEND ANY OF THE ABOVE IN INTERVIEW.
